

Repository Manager Planning

Planning requirements needed for successful installation and implementation of Nexus Repository Manager 3 (NXRM3).

1. How many employees are using NXRM3?

2. How are user accounts managed in your organization?

3. How many installations of NXRM3 are needed?

4. Where will repositories be located?

5. What source control management tools are used in your organization?

6. What build tools are in place?

7. What languages are used in your organization?

8. What package formats are used in your organization?

9. What languages and package formats do you anticipate adding in the future?

10. Which public repositories are accessed by your team?

11. Does your team plan to host components?

Mark only one oval.

Yes

No

12. Are multiple hosted repositories are needed?

Mark only one oval.

Yes

No

13. How many applications are managed in your organization?

14. What gateway is used for external OSS and commercial components?

15. How much storage is needed for internal components and where will that storage be located?

16. How much storage is needed for build output and where will that storage be located?
